

Crew Change

Transferring your most valuable assets

Ampelmann provides customised solutions and services to enable safe and efficient marine crew change operations. The latest addition to our fleet is the improved L-type system, specifically designed to suit the needs of fast and lightweight vessels. It can help save up to 30% on your logistics expenses in comparison to traditional methods, such as swing ropes and helicopters, by increasing the safety, efficiency and workability of crew change operations.

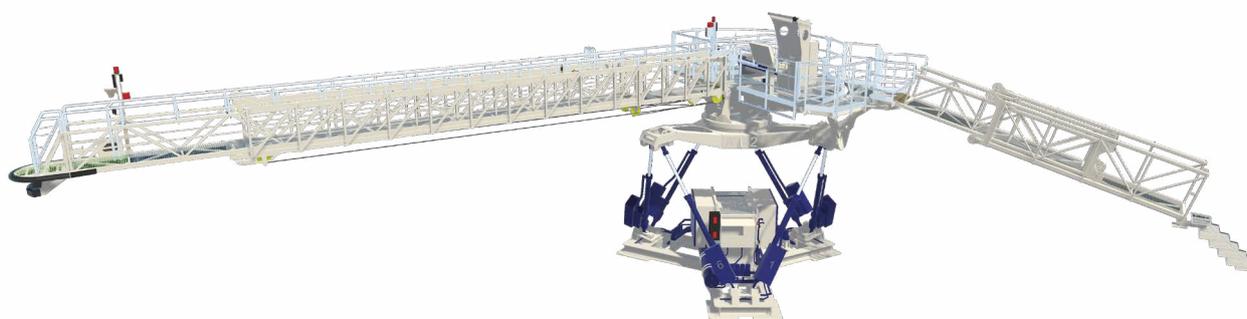

AMPELMANN

Ampelmann's systems for Crew Change

With our fleet of active motion compensated gangway systems, we can mobilise quickly and enable safe and reliable crew change operations on a daily basis. Our systems are suited to smaller, fast crew vessels and are able to transfer personnel in calm (L-type) as well as rougher waters (A-type).

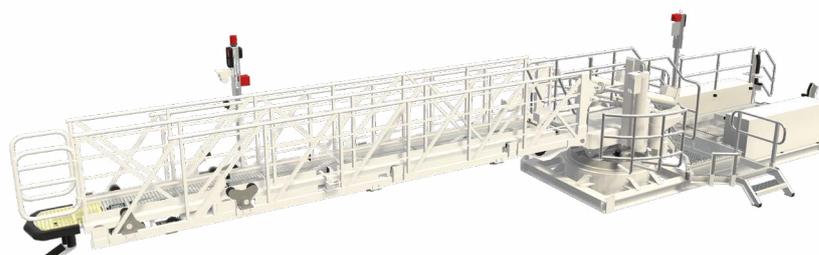

A-type

- Safe people transfers
- Workability up to 3m H_S
- Unparalleled track record
- Continuous access via slideway (as an add-on)

L-type

- Safe people transfers
- Workability up to 2m H_S
- Continuous flow of personnel
- Containerised transport

Reference projects

Operations support in O&G exploration

This project required a customised gangway design by incorporating the vessel characteristics and landing location to eventually bring down operational costs. Ampelmann tailored its A-type gangway system to the client's challenge and helped reduce expenses by decreasing the need for helicopter transfers.

Excellent alternative to swing roping

The client used to transfer their crew from their 35m monohull vessels to their platforms with swing ropes. They chose to implement multiple L-type solutions, which were integrated without the need for any vessel modifications. Since then, the systems have completed over 180,000 people transfers.

“ The main drivers in the crew change market are safety and efficiency. There is an increasing awareness among international oil companies that current operations can be significantly improved to ultimately increase productivity. ”
